Course Outline

A first course in programming emphasizing problem solving and computational thinking. Topics include pseudocode, variables, conditionals, iteration, arrays, objects, functions, sorting, searching, and simulation.

Required Textbook

Readings will be assigned from the following online textbook:

Assessment Scheme

Your performance in this course is assessed using several components. These include a collection of ten (10) mandatory weekly tutorials (beginning the week of January 9th), five (5) assignments, two (2) in-class midterms (Friday, February 10th and Friday, March 17th), and a final examination (to be scheduled by the registrar). The grades you achieve on these components will be weighted with the following scheme.

- Tutorials (10 x 1% each) 10%
- Midterms (2 x 10% each) 20%
- Assignments (5 x 8% each) 40%
- Final Examination 30%

Tutorials are mandatory - attendance is taken at the beginning of each tutorial and you will receive marks each time you participate in the tutorial for the full 1.5 hours. You must attend the tutorial in which you are registered – you will not receive marks if you attend a tutorial other than the one in which you are registered. While the tutorial is in progress you must be working on the tutorial. You may not work on an upcoming assignment during the tutorial, and anyone who is not working on the tutorial work will be asked to leave and will not receive any marks.

Assignments are mandatory. You will use cuLearn to submit your assignments and you must ensure that the marks posted to cuLearn are correct within one week of the date the assignment was graded. Concerns or complaints about the grading of the assignments must be communicated to the teaching assistant within that time – after one week, no assignment remarking is possible.

Midterms are closed-book, and cover material presented since the most recent midterm.
Learning Outcomes

If a student attends every lecture and completes every assignment and tutorial, then by the end of this course that student should be able to:

- Use a **programming language** to write computer programs (in the imperative paradigm)
- Explain the **difference** between designing an algorithm and implementing an algorithm in source code
- Apply different **problem-solving heuristics** (e.g., divide-and-conquer, abstraction, etc.)
- Explain the following topics:
  - data types, variable assignment, propositional logic, Boolean values
  - branching, repeating, and nested control structures, "if" statements, "for" and "while" loops
  - one-dimensional and multi-dimensional lists, other collections (tuples, dictionaries, etc.)
  - functions and recursion, objects for data storage, simulation
- Implement some basic searching and sorting algorithms

Important Considerations

Late assignments are accepted for 8 hours after the posted deadline, but they incur a penalty of 2.5% / hour.

Assignments submissions are handled electronically, so there is no "grace period" with respect to a deadline - after 8 hours the submission will receive a mark of zero.

Technical problems do not exempt you from this requirement, so if you wait until the last minute and then have issues with your connection, you will still receive a mark of zero. Consequently, you are advised to:

- **periodically upload you progress** (i.e., upload partially completed submissions)
- attempt to **submit your final submission at least 30 minutes in advance** of the due date and time
- **download your submission and verify** the contents after submitting

For each assignment you will be submitting one or more files that contain **source code**. These files must be **compressed into a "zip" file**. If you do not compress your source code files or if you compress your files into another format (e.g., "rar", "tar", etc.), then your assignment will be rejected and will receive a mark of zero.

If a source code file you submit does not run it will receive a mark of zero. Consequently, after you upload your **submission** to **cuLearn** you must **re-download it immediately and ensure that**:

- your submission is a "zip" file that is not corrupt (i.e., it can be opened properly)
- each of your source code files can be run from a command line in Windows without error
- each of your source code files can be viewed in a text editor (for marking purposes)

You are expected to **demonstrate good programming practices at all times** and your code may be penalized if it is **poorly written**. You are also expected to do the necessary preparatory work (i.e., devising an algorithm) before you start coding. **You may be asked to present either pseudocode or a flowchart before you will receive any assistance** from the instructor or a teaching assistant.

Students with an **illness on the day of a midterm or tutorial might be granted an exemption** if and only if they provide a **Carleton University Medical Certificate** ([http://carleton.ca/registrar/wp-content/uploads/med_cert.pdf](http://carleton.ca/registrar/wp-content/uploads/med_cert.pdf)) that has been completed and signed by a physician. **Please note that a student cannot, for any reason, be exempted from both midterms**. Furthermore, because assignment specifications are posted well in advance of
Course Outline

their due dates, **illness does not excuse a student from completing an assignment.** No provision is made for missed assignments, and no extra credit assignments will be available.

University Policies

**Student Academic Integrity Policy**

Every student should be familiar with the Carleton University student academic integrity policy. A student found in violation of academic integrity standards may be awarded penalties, which range from a reprimand to receiving a grade of F in the course or even being expelled from the program or University. Some examples of offences are plagiarism and unauthorized co-operation or collaboration. Information on this policy may be found in the Undergraduate Calendar.

**Plagiarism**

As defined by Senate, "plagiarism is presenting, whether intentional or not, the ideas, expression of ideas or work of others as one’s own"). Such reported offences will be reviewed by the office of the Dean of Science.

**Unauthorized Co-operation or Collaboration**

Senate policy states that "to ensure fairness and equity in assessment of term work, students shall not co-operate or collaborate in the completion of an academic assignment, in whole or in part, when the instructor has indicated that the assignment is to be completed on an individual basis". Please refer to the course outline statement or the instructor concerning this issue.

**Academic Accommodations for Students with Disabilities**

The Paul Menton Centre for Students with Disabilities (PMC) provides services to students with Learning Disabilities (LD), psychiatric/mental health disabilities, Attention Deficit Hyperactivity Disorder (ADHD), Autism Spectrum Disorders (ASD), chronic medical conditions, and impairments in mobility, hearing, and vision. If you have a disability requiring academic accommodations in this course, please contact PMC at 613-520-6608 or pmc@carleton.ca for a formal evaluation. If you are already registered with the PMC, contact your PMC coordinator to send me your Letter of Accommodation at the beginning of the term, and no later than two weeks before the first in-class scheduled test or exam requiring accommodation (if applicable). After requesting accommodation from PMC, meet with me to ensure accommodation arrangements are made. Please consult the PMC website for the deadline to request accommodations for the formally-scheduled exam (if applicable) at [http://www2.carleton.ca PMC/new-and-current-students/dates-and-deadlines](http://www2.carleton.ca PMC/new-and-current-students/dates-and-deadlines)

**Religious Obligation**

Write to me with any requests for academic accommodation during the first two weeks of class, or as soon as possible after the need for accommodation is known to exist. For more details visit the Equity Services website: [http://www2.carleton.ca/equity/](http://www2.carleton.ca/equity/)

**Pregnancy Obligation**

Write to me with any requests for academic accommodation during the first two weeks of class, or as soon as possible after the need for accommodation is known to exist. For more details visit the Equity Services website: [http://www2.carleton.ca/equity/](http://www2.carleton.ca/equity/)

**Medical Certificate**
Course Outline

The following is a link to the official medical certificate accepted by Carleton University for the deferral of final examinations or assignments in undergraduate courses. To access the form, please go to http://www.carleton.ca/registrar/form

Undergraduate Academic Advisor

The Undergraduate Advisor for the School of Computer Science is available in Room 5302C HP, by telephone at 520-2600, ext. 4364 or by email at undergraduate_advisor@scs.carleton.ca. The undergraduate advisor can assist with information about prerequisites and preclusions, course substitutions or equivalencies, understanding your academic audit and the remaining requirements for graduation. The undergraduate advisor will also refer students to appropriate resources such as the Science Student Success Centre, Learning Support Services and the Writing Tutorial Services.

You must also read: http://calendar.carleton.ca/undergrad/regulations/academicregulationsoftheuniversity/

Additional Notes

Including the time spent attending lectures and completing tutorials, students can expect to spend at least ten (10) hours per week on this course. Students are responsible for all course materials, including lecture notes, tutorial exercises, and all materials discussed in class and on any of the official discussion boards.

Students are asked to pose all questions related to course content using the official discussion boards on cuLearn; students should not email the instructor directly unless the question contains confidential information or is of a personal nature.

The instructor will attempt to answer every student email received within 48 hours of the time the message was received, unless the email requests information already posted on cuLearn or in the course outline. All emails regarding the course should be sent from your Carleton email account. To ensure that all announcements are received, students are expected to check their Carleton email on a daily basis.

All materials created for this course (including, but not limited to, lecture notes, in-class examples, tutorial exercises, assignments, examinations, and posted solutions) remain the intellectual property of the instructor. These materials are intended for the personal and non-transferable use of students registered in the current offering of the course. Reposting, reproducing, or redistributing any course materials, in part or in whole, without the written consent of the instructor, is strictly prohibited.

Plagiarism Policy

There is a separate plagiarism policy document for this course that is located on the main cuLearn page for the course. Students must read this document thoroughly and must agree to adhere to this policy (and to all policies stated in this course outline) before the assignment resources will be made available.

In the event that a student has been found to have committed an instructional offence, a penalty will be applied to that student’s final grade. If the penalty applied by the Office of the Associate Dean is less than the total value of the assignment, the remaining weight associated with that assignment is shifted onto the weight of the final exam. Consider the following case as a clarifying example: if the course has an assignment worth 10% and a final worth 40% and a student plagiarizes and receives a 50% deduction to his or her assignment, their final exam would
be worth 45% of their final mark and the plagiarized assignment would be worth nothing. To clarify, 50% of the 10% allocated to the assignment was lost and the remaining 50% of the 10% allocated to the assignment was shifted to the final.

Students are invited to discuss any concerns with the instructor at the earliest opportunity.
