Instructor: Chantal Trudel
chantaltrudel@cunet.carleton.ca
Room 3476 Mackenzie Building (ME).
Tel. 613 • 560 • 2600, ext. 5626

Teaching Assistant: N/A
Office Hours: During studio/lecture hours or by appointment.

Time and Location: Please refer to Carleton Central under Student Services – Registration – Search Schedule: https://admissions.carleton.ca/faqs/where-can-i-find-the-class-schedule/

Course Description:
Critical review of qualitative and quantitative research methods to support interdisciplinary design. Methods used by collaborators from the sciences and humanities as well as methods designers bring to interdisciplinary collaborations are introduced. Research for design, research through design and theoretical frameworks are discussed.
Includes: Experiential Learning Activity
Also listed as HCIN 5404.
Learning Outcomes:

By the end of this course, students will be able to:

1. Critically review literature on research approaches or theoretical frameworks.
2. Identify and select appropriate qualitative and quantitative research methods.
3. Design and evaluate research methods and a methodology appropriate to a study’s objectives.
4. Plan a design research study.
5. Create an ethics application.
6. Effectively communicate a research approach and rationale through written, visual and oral mediums.
7. Demonstrate professional behaviour.

Required Materials:

Materials required for the course are listed below. You may be asked by your instructor to refer to cuLearn and ARES for a more comprehensive list of required materials.

These are key textbooks that will be used throughout this course. Hardcopies have been ordered through the Carleton bookstore with the exception of Robson & McCartan’s Real World Research which is available as an eText through the VitalSource bookshelf which you can buy to have permanent access (please consult with Carleton bookstore if you are interested in this option). Alternatively, these books are available through the MacOdrum Library (see ARES on cuLearn).

Course Deliverables:
These are the deliverables for this course. Please see Appendix A Course Schedule for more detailed information.

Assignment 1 Essay: 25%
Assignment 2 Mini-Study: 25%
Assignment 3 (Presentation/Report): 15%/25%
Statistics Workbook: 10%.

Individual/Group Work
Courses may include individual and group work. It is important in collaborative work that students clearly demonstrate their individual contribution.

Late Submission of Lecture & Studio Deliverables
Students who do not hand in deliverables on time will have their earned grade reduced by 5% per day up to a maximum of 3 days.

Participation and Professionalism
Active participation and professional conduct (e.g. class discussion, consultations with instructors, work ethic, etc.) are important in lecture and studio courses and may be formally evaluated by a grade.

Student Access to Quiz, Test and Exam Papers
Examinations will be returned to students with comments and explanations.

Requests for Academic Accommodation
You may require special arrangements to meet your academic obligations during the term. For an accommodation request for any of the following topics below, refer to the link provided for more information: https://students.carleton.ca/course-outline/

- Parental Leave
- Religious/Spiritual Obligation
- Academic Accommodations for Students with Disabilities
- Survivors of Sexual Violence
- Accommodations for Student Activities

Academic Integrity
Carleton’s Policy on Academic Integrity is available at: https://carleton.ca/registrar/academic-integrity/ and covers the following topics:

Plagiarism (e.g. submitting work in whole or in part by someone else, failing to acknowledge sources through the use of proper citations when using another’s work).

Test and Exam Rules (e.g. attempting to read another student’s exam paper, speaking to another student even if the subject matter is irrelevant to the text, using material not authorized by the examiner).

Other Violations (e.g. improper access to confidential information, disruption in classroom activities, misrepresentation of facts for any academic purpose).

The policy governs the academic behavior of students. In industrial design, ideas and concepts come from a multitude of sources and may be modified and utilized in the design and development process. The student should reference such sources appropriately and it is strongly advised that you read Carleton’s Policy on Academic Integrity prior to conducting any work at the University.

Student Responsibility
The student is responsible for knowing the content of this course outline; the schedule of classes, assignments, and/or Reviews; and the material that was covered when absent. The studio is a professional environment and students should be working during the scheduled hours.

Unless otherwise arranged, the class will meet during scheduled class hours. Please note that attendance is important since issues and questions may be raised in class, and announcements made, along with information disseminated through cuLearn. As external professionals are often involved in our work, scheduling changes for guest lectures, presentations, and Reviews may occur at short notice, requiring students to stay informed.

Changes to the Course Outline

The course outline may be subject to change in the event of extenuating circumstances.

Appendix A - Course Schedule

There are a variety of schools of thought on research approaches, a variety of methods from social sciences and humanities and a variety of methods used in design. This course provides an introduction to this landscape through a variety of readings from experts in the field, complemented by activities and assignments where you can practice applying what you’ve learned. In order to become adept at defining a research problem and understanding, selecting and applying research methods to answer our questions, we need to read about the methods available to us in detail and find the right fit. This course provides a reading framework designed to help bring you through this material and build your confidence in conducting research.
